

# SOLID-STATE CONTACTORS

For frequent switching without contact bounce  
 No wear and tear and silent operation thanks to semiconductor technology  
 Non-hazardous switching of inductive loads  
 Reduction of switch-on current thanks to zero voltage switching

Clear LED status display  
 Integrated overload protection  
 DIN rack or screw assembly  
 Space-saving: standard module width from 22.5 to 90 mm  
 Integrated cooling element with optional thermal protector

Comat Releco solid-state contactors are used wherever almost infinite service life and a high number of switching cycles, high switching frequencies and silent switching is required.

Unlike mechanical contactors, the solid-state contactor does not show any signs of wear and tear. A lack of movable components prevents wear and creates resistance against vibrations. A varistor switch protects against damage caused by overvoltage. Comat Releco solid-state contactors have an integrated cooling element with optional thermal protector to provide a high degree of safety during operation. This feature creates great reliability, saves regular and expensive service work and prevents against costly system downtimes.

The solid-state contactors of the CC and CR series are available in single-phase, two-phase and three-phase design. They are designed for switching alternating current loads of up to 125 A at 400 V AC. The control voltage range is 24 to 230 V AC/DC.

The reversing contactor of the CCR series for motor loads up to 10 A has an integrated electronic interlock for both control Mechanical datas to prevent application errors.

The one-phase solid-state performance regulator CPC is suitable for triggering heating elements, lamps and transformers up to 50 A.

The solid-state contactors of the CC series are suitable for the non-contacting and non-wearing switching of resistive and inductive alternating loads with a high switching frequency. They are available with a max. operating voltage of 400V AC and a rated current of max. 63A in single-phase and three-phase design. The control voltage range 24–230V AC/DC is available.

The CR series solid-state contactors are suitable for the contactless and non-wearing switching of ohmic and inductive AC loads at high switching frequency. They are available with an operating voltage of 400 V AC and a rated current of up to 125 A in single-phase and two-phase design. A control voltage range from 24–230 V AC/DC is available.
